

# SAAD IKRAM

Flutter Developer | Mobile App Development | AI Integration  
+92-314-5459961 | saadnaz43165@gmail.com | Chakwal, Punjab, Pakistan  
[github.com/saad43165](https://github.com/saad43165) | [portfolio-saad-mu.vercel.app](https://portfolio-saad-mu.vercel.app)

## PROFESSIONAL SUMMARY

Software Engineering graduate with 3 internships and a growing portfolio of cross-platform mobile applications. Flutter first developer with hands-on experience building AI-powered features, Firebase & Supabase backends, and REST API integrations. Also built 3 projects in React Native — comfortable with both ecosystems, though Flutter is where I do my best work. Eager to contribute to a professional team and keep growing as a mobile developer.

## EDUCATION

### Bachelor of Software Engineering

Oct 2022 – May 2026

Pak-Austria Fachhochschule: Institute of Applied Sciences and Technology, Mang, Haripur

### HSSC – Pre-Engineering (Grade: A1)

2019 – 2021

Mulhal Science College

### SSC – Matriculation (Grade: A1)

2017 – 2019

Blooming Scholars Academy, Mulhal

## EXPERIENCE

### Software Engineering Intern

Jun 2025 – Sep 2025

Saf's Solutions | Rawalpindi, Pakistan

- Developed responsive cross-platform applications in React Native, ensuring seamless UX and functional consistency across Android and iOS.
- Collaborated in agile development cycles, contributing to component architecture, state management, and API integration.
- Participated in code reviews and sprint planning, improving delivery quality and team coordination.

### Flutter Development Intern

Jun 2024 – Aug 2024

Saf's Solutions | Rawalpindi, Pakistan

- Built Flutter frontend components and integrated third-party APIs to ensure application effectiveness and reliability.
- Gained hands-on experience with state management patterns and Firebase backend services.
- Assisted in diagnosing and fixing UI/UX issues, reducing reported bugs by iterating on user feedback.

### Corporate Trainee Intern

Jul 2023 – Sep 2023

Wah Noble Group of Companies | Wah, Pakistan

- Developed professional skills in a corporate environment through diverse technical and collaborative tasks within structured development cycles.
- Strengthened teamwork and communication skills by contributing to cross-functional team deliverables.

## PROJECTS

---

### AgriGuard: AI-Powered Plant Disease Detection (FYP)

*Aug 2025 – May 2026*

**Tech:** Flutter, TensorFlow Lite, EfficientNetB3, Firebase, Python, Dart

- Developed a cross-platform mobile app providing offline, real-time plant disease identification for remote farmers, directly addressing agricultural yield losses.
- Engineered a hybrid deep learning framework using EfficientNetB3 and TFLite, achieving 94.8% classification accuracy within a 3.1 MB model optimised for low-end Android devices.
- Implemented a 5-part diagnostic system: severity quantification via pixel-ratio analysis, localised remediation guidance, and multimodal API for out-of-distribution (OOD) species detection.
- Integrated Firebase for cloud-based Advanced AI scan mode, enabling seamless online/offline fallback for farmers with intermittent connectivity.

### MediVision: AI-Powered Healthcare Assistant

**Tech:** Flutter, FastAPI, Python, SQLite, Capacitor, OCR, FDA Drug API

- Built a full-stack cross-platform health tracking app with secure JWT authentication, role-based access control, and a premium responsive UI across Android and iOS.
- Integrated an AI Prescription Scanner using OCR to digitise handwritten medical data and queried the FDA Drug Database to alert users of dangerous drug interactions in real time.
- Developed a predictive linear regression engine in Python to analyse historical patient vitals and forecast 30-day health trajectories, including hypertension and chronic risk scoring.
- Designed a modular FastAPI backend with SQLite persistence, exposing RESTful endpoints consumed by both the mobile app and a Capacitor-powered web interface.

### VaxGuard: AI-Powered Clinical Decision Support System

**Tech:** Flutter, Dart, Provider, Local Storage, REST APIs

- Built a high-fidelity cross-platform diagnostic triage and vaccination management app with interactive anatomical mapping UI and multi-language support (English / Urdu).
- Integrated a WHO 2018 Rabies Protocol-compliant Animal Bite Assessor evaluating bite location and exposure severity, auto-generating personalised Post-Exposure Prophylaxis (PEP) schedules.
- Built a real-time geospatial Live Outbreak Radar to monitor active disease outbreaks near the user, with push notifications for proximity alerts.
- Implemented a secure local persistence layer to maintain full patient history, diagnostic assessments, and vaccination records across sessions.

### RunQuest: Gamified Territory Conquest & Fitness App

**Tech:** React Native, Expo, TypeScript, Firebase, Zustand, Turf.js

- Architected a gamified fitness app where users track real-world runs to claim virtual territories on a live map, combining geolocation, health metrics, and multiplayer competition.
- Engineered territory conquest mechanics using Turf.js and React Native Maps — processing live GPS data to calculate closed-loop paths, polygon areas, and competitive takeovers in real time.
- Built a live multiplayer ecosystem with Firebase: real-time presence tracking, global team-based leaderboards, and a dynamic activity feed for sustained user engagement.

- Designed a premium UI with Zustand state management, Expo Reanimated micro-interactions, real-time weather, dynamic map themes, achievement system, and a custom in-app music player.

### GitHub Repository Explorer

**Tech:** Flutter, Dart, GitHub REST API, SharedPreferences, url\_launcher

- Built a mobile app interfacing with the GitHub REST API to search and explore repositories by name, language, or owner with infinite-scroll pagination.
- Engineered efficient async HTTP handling with dynamic filtering to deliver a responsive, non-blocking data experience even on slow connections.
- Built a local storage ecosystem using SharedPreferences — persisting search history and a favourites system for offline tracking of bookmarked repositories.
- Designed a glassmorphism-inspired UI with micro-animations, gradient themes, dark/light mode toggle, and bottomsheet modals for intuitive navigation.

## TECHNICAL SKILLS

---

- |                                          |                                       |
|------------------------------------------|---------------------------------------|
| ▶ Flutter (Dart)                         | ▶ Firebase (Auth, Firestore, Storage) |
| ▶ REST API Integration                   | ▶ Databases (SQLite, Supabase, MySQL) |
| ▶ State Management (Provider, Riverpod)  | ▶ Version Control (Git / GitHub)      |
| ▶ TensorFlow Lite (AI Model Integration) | ▶ Python (FastAPI, Data Scripts)      |
| ▶ React Native (Expo, TypeScript)        | ▶ Canva (Graphics & Design)           |
| ▶ OCR & Camera Integration               | ▶ Android Build & Deployment          |

## LANGUAGES

---

- |                    |                                      |
|--------------------|--------------------------------------|
| ▶ Urdu — Native    | ▶ English — Professional Proficiency |
| ▶ Punjabi — Native |                                      |
